

Sensitive Cardiac Troponin I Antibody Pair

- Most sensitive when using patient samples
- SDIX TPC110, currently one of the leading cardiac troponin I (cTnI) antibodies, targeting aa 24-40
- SDIX 10C9, new monoclonal antibody specific to cardiac troponin I (cTnI), targeting aa 41-60

TPC110 capture 10C9 detection pair shows greater sensitivity compared to a commonly used competitor's pair (figure 1).

*Note – Graphs based on unpublished internal data

Catalog number	Description
D4160MA01-MA	SDIX 10C9, Protein A purified
B9085MA06-MA	SDIX TPC110, Protein A purified
B9085MD09-MD	SDIX TPC110, DEAE purified

Your Antibody Partner – Innovating to a Healthier Tomorrow

TPC110 capture 10C9 detection pair shows greater sensitivity (figures 2, 4) and the ability to detect low levels of cardiac troponin I (cTnI) in human patient samples (figures 3, 5).

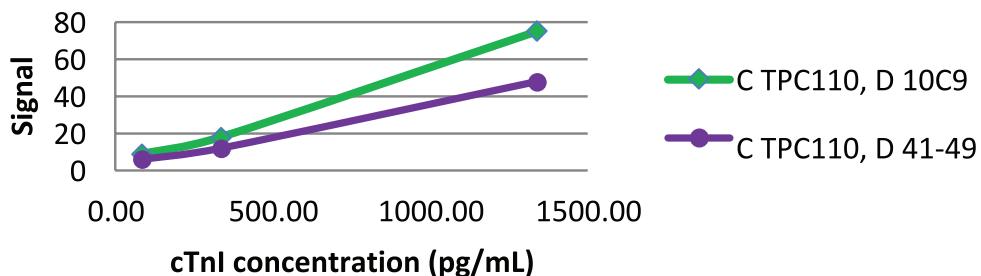

Figure 2*. 10C9 detection compared to a leading competitor's detection antibody targeting aa 41-49 in serum titration

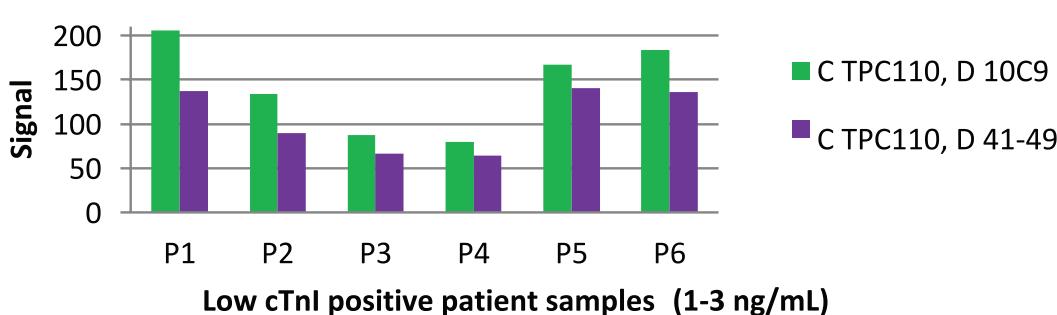

Figure 3*. 10C9 detection compared to a leading competitor's antibody targeting aa 41-49 in 6 patient samples

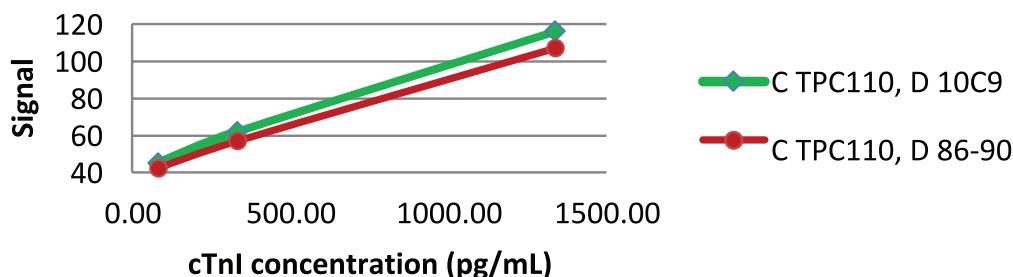

Figure 4*. 10C9 detection compared to a leading competitor's detection antibody targeting aa 86-90 in serum titration

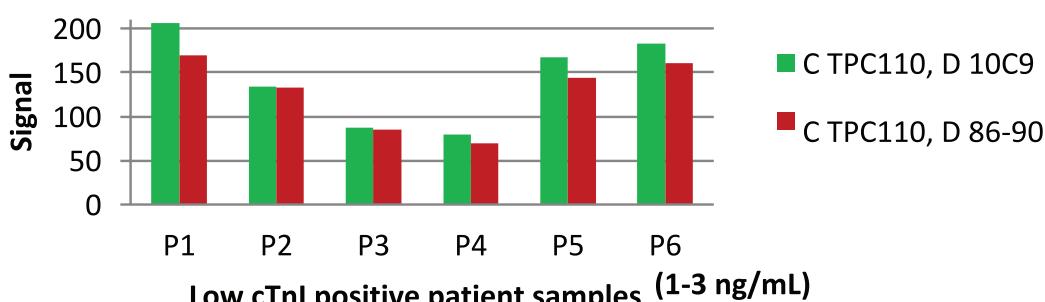

Figure 5*. 10C9 detection compared to a leading competitor's antibody targeting aa 86-90 in 6 patient samples
